GREAT INDIAN AI INTERNSHIP CHALLENGE 2026

DUKAAN SAATHI

An AI-powered Hindi and Hinglish voice assistant for grocery ordering at neighbourhood kirana stores.

THE IDEA
Let a shopkeeper take a grocery order by speaking naturally. Dukaan Saathi turns the spoken request into a structured order, reads it back, and supports contextual voice corrections.

PROBLEM

Small kirana stores often receive orders through quick spoken conversations. Manually noting items, quantities and units can take time and may lead to misheard or incomplete orders.

SOLUTION

Dukaan Saathi provides a voice-first ordering workflow in Hindi/Hinglish. It transcribes the request, extracts product details, validates the structured order, and gives a spoken confirmation that the customer can correct.

HOW IT WORKS

1. SPEAK Hindi / Hinglish voice request › **2. TRANSCRIBE** Gnani Prisma v2.5 STT › **3. UNDERSTAND** Groq-hosted LLM order extraction › **4. VALIDATE** Pydantic structured order › **5. CONFIRM** Gnani Timbre v2.5 TTS

Correction loop: The user can trigger a separate correction recording. The correction is transcribed and interpreted against the existing order context; the updated order is returned with a new spoken confirmation.

IMPLEMENTED CAPABILITIES

- Hindi/Hinglish voice ordering
- Product, quantity and unit extraction
- Structured order validation and preview
- Spoken order confirmations
- Context-aware voice corrections
- Typed correction fallback

TECHNOLOGY

Backend: Python, FastAPI, Pydantic
Speech: Gnani Prisma v2.5 STT; Gnani Timbre v2.5 TTS
Language model: Groq API (openai/gpt-oss-20b)
Frontend: HTML, CSS, JavaScript, Web Audio API
Deployment: Render

VALUE & NEXT STEPS

The project explores a more natural, language-accessible way for kirana stores to capture orders. Potential next steps include product-catalogue matching, inventory integration, billing, and broader testing with real shopkeepers and varied accents.
